

8 Bit Full Addr -part 1

המסכם מוציא את הסכום שני מחזורי שעון אחרי הכניסה של הערכים שמבוקש :

ע"י מוניטור ניתן לראות שבמחזור שעון מסוים ערך שתי הכניסות 3 ו 5 ושני מחזורי שעון אחרי מקבלים את הסכום 8 (עם ערך חיובי ל data_valid) .. כפי שמופיע בתמונה והמלבנים :

```

```

Data valid :

שני מיזורי שעון אחרי ש $\text{data_valid} == 0$ מקבלים ערך הסכום אפס (בגלל איפוס הכניסה) וערך $\text{data_ready} = 0$ כמצופה :

A1= 7, B1= 15, cin=0, Data_val=1, rest_n=1, Des_address=0, Des_value= 3, Des_req_valid=0, Des_wr_rd=0, SI= 90, Overflow=0, Data_ready=1, Des_rd_value= 15
A1= 7, B1= 15, cin=0, Data_val=1, rest_n=1, Des_address=0, Des_value= 3, Des_req_valid=0, Des_wr_rd=0, SI= 22, Overflow=0, Data_ready=1, Des_rd_value= 15

סכימת כניסות עם האופסיט בריגסטר :

במלבן האדום : $val_a = 255$, $val_b = 5$ וגם לתוך control register נשמר הערך 1 (enable)

במלבן הירוק : נשמר הערך 15 לתוך offset register

במלבן הכתום : רואים הסכום של $255+5+15$ (סכום הכנסיות עם האופסיט) שזה 100010011
בינארי. 1. overflow = 19

```
